

Customer Validation Tracker

Guardian MVP customer validation workbook

Use this workbook to determine whether Guardian detects problems that matter to real businesses and explains them clearly enough to support action. Technical access confirms whether a finding is correct; the business owner confirms whether it is understandable, relevant, and useful.

Current position: Guardian has completed a bounded technical audit of ten authorized public websites. Customer outcomes remain unconfirmed until an owner or authorized business operator reviews the findings.

PRD requirement: complete validation with at least 5 businesses, with 5 to 10 as the target, before major product expansion. Deployment is not required for these interviews or the local audit workflow.

How to use this workbook

1. Obtain explicit permission before each review or website change.
2. Run the same local, read-only audit and preserve the dated result.
3. Verify technical findings using authorized backend access.
4. Show the owner plain-language findings and record their answers without leading them.
5. Only report a problem as prevented or resolved when the owner confirms the outcome and evidence.

Portfolio tracker

Update the final three columns only from documented customer responses and verified outcomes.

No	Website	Technical snapshot for review	Customer status
1	okapiccf.com	Slow response snapshot; browser-protection settings	Pending
2	ritssbeauty.com	Homepage heading; browser-protection settings	Pending
3	hmcng.com	Homepage heading; browser-protection settings	Pending
4	gabofarms.com	Search visibility information and page structure	Pending
5	gabogreenenergysolutions.com	Search visibility information and page structure	Pending
6	mvpterminalllc.com	Search-result description; browser protection	Pending
7	fareharbor.com	Sitemap redirect; browser protection	Pending
8	danwebdevelopment.com	Search visibility, sitemap, and browser protection	Pending
9	nenafrika.com	Rerun HTTP 200; 3.6-second response; prior timeout not reproduced	Pending
10	africancounciloftometry.org	Search visibility information and page structure	Pending

Validation process for each business

- 1. Confirm authorization.** Record that the website owner or authorized operator has agreed to the review. Technical access does not automatically grant permission to publish feedback or change the website.
- 2. Run the baseline audit.** Run the local detailed audit, then record the date, score, coverage, critical findings, warnings, evidence, response times, and incomplete checks.
- 3. Verify technical findings.** Check the relevant website backend, CMS, hosting settings, forms, and response headers. Classify each finding as accurate, partly accurate, false positive, or incomplete evidence.
- 4. Explain the result.** Use plain language. State what Guardian observed, why it may matter, what evidence supports it, what Guardian cannot verify, and the recommended next action.
- 5. Collect owner feedback.** Ask the standard questions in this workbook. Record the owner's own words and do not suggest a preferred response.
- 6. Apply only approved changes.** Document the finding, proposed correction, approving person, and date. Do not submit live forms or alter production settings without explicit approval.
- 7. Measure the outcome.** Re-run the same check after an approved correction. Record no action, action with unknown outcome, resolved, prevented, false positive, or useful with no immediate action.

Initial outreach message

Copy and personalize this message:

Hello [Owner's name],

I am testing Guardian, a service designed to warn businesses when their website may be slow, difficult to find on Google, unavailable, insecurely configured, or unable to receive customer enquiries.

I ran a limited, read-only health check on [website]. It did not change anything or submit any forms. The check found:

- [Finding in plain language]
- [Second finding in plain language]

These are preliminary observations, not proof that customers or revenue have already been lost. I would like your business feedback to determine whether the information is understandable and useful.

The review should take about 10 to 15 minutes. No technical knowledge is required. May I send you the results and ask a few questions?

Plain language findings

okapiccf.com. The website took longer than Guardian's three-second target during the check. Some standard browser-protection settings also appear to be missing. This single result does not establish a continuing performance problem.

ritssbeauty.com. Guardian could not identify a clear main heading on the homepage. This may make the page structure less clear to accessibility tools and search engines. Some standard browser-protection settings also appear to be missing.

hmcng.com. Guardian could not identify a clear main heading on the homepage. Some standard browser-protection settings also appear to be missing.

gabofarms.com. The homepage appears to be missing some information that helps search engines understand and display it correctly. Some standard browser-protection settings also appear to be missing.

gabogreenenergysolutions.com. The homepage appears to be missing some basic search-engine information and page structure. Some standard browser-protection settings also appear to be missing.

mvptterminallngllc.com. The homepage appears to be missing the short description search engines may display in search results. Some standard browser-protection settings also appear to be missing.

fareharbor.com. The website's search-engine page list redirects somewhere else instead of responding directly. This does not mean the page list is absent. Some browser-protection settings may also need improvement.

danwebdevelopment.com. Guardian found missing or incomplete information that helps search engines understand the homepage and locate the website's pages. Some standard browser-protection settings also appear to be missing.

nenafrica.com. An earlier check had difficulty reaching the website. A later check succeeded, but the homepage took about 3.6 seconds to respond. This is not enough evidence to call it a continuing performance problem. Some standard browser-protection settings also appear to be missing.

africancouncilofoptometry.org. The homepage appears to be missing some information that helps search engines understand and organize it. Some standard browser-protection settings also appear to be missing.

Business owner questionnaire

Ask these questions after the owner agrees to participate. Record the owner's answer as given.

1. What is the most important job your website performs for your business?

2. Is Guardian's explanation understandable?

☐ Yes ☐ Partly ☐ No

3. Do the findings appear relevant to your business?

☐ Yes ☐ Partly ☐ No ☐ Unsure

4. If Guardian sent this warning automatically, would you know what to do next?

☐ Yes ☐ No

5. Would you ask someone to investigate or fix any of these findings?

☐ Yes ☐ No ☐ Unsure

6. Have you previously experienced website slowness, downtime, missing enquiries, poor Google visibility, or security concerns?

☐ Yes ☐ No ☐ Unsure

7. Would an earlier warning have saved time, money, enquiries, or customer trust?

8. What information would make Guardian's warning more useful?

9. How useful is this report?

☐ 1 Not useful ☐ 2 ☐ 3 ☐ 4 ☐ 5 Extremely useful

10. Would you continue using Guardian to monitor your website?

☐ Yes ☐ No ☐ Unsure

Per business validation record

Complete one copy of this form for each participating business. Keep sensitive contact details outside this document when appropriate.

Guardrails

- Do not describe a technical snapshot as confirmed revenue loss.
- Do not describe a basic security finding as a complete cybersecurity assessment.
- Do not call a single response-time result a performance trend.
- Do not submit live customer forms or alter production settings without explicit approval.
- Record unknown when an owner cannot estimate time, cost, or opportunity impact.
- Keep permission to participate separate from permission to quote feedback publicly.

Approved correction message

You approved the following change: [finding]. The proposed correction is [plain-language correction]. I will make only this specific change and run the same Guardian check again. I will not make other website changes without your permission. Please confirm that I may proceed.

Outcome confirmation questions

After the approved change and follow-up audit, ask:

1. Do you consider the original problem resolved?
2. Was Guardian helpful in identifying or explaining it?
3. Did this save time, cost, enquiries, or business risk? Record unknown if it cannot be estimated.
4. May we record your response for internal product validation?
5. May we quote your feedback publicly? This permission is optional and separate.
